

New standards IEC 61850 and IEC 61400-25 for Wind-Energy The standard for generation Transport and Distribution (T&D) of electrical energy

Advantages of IEC 61850

- Data bus with complete protocol instead of many single links
- Significant reduction of TCO (Total Cost of Ownership) in LAN and WAN
- Positive influence on costs for installation, configuration and maintenance
- Elimination of isolated applications

Real object-orientated approach for automation

- Supports standardised models applying names instead of user-defined object numbers and indices
- Standardised configuration language (SCL).
- Features with support also for complex functions
